## OPERATION

## How to Play

1．Insert coins／tokens into coin slot，the display will show credits and the crane starts game music．
2．Use the joystick to move claw above your selected object．When you move the joystick，the game time counts down，and【DESCEND】button light is flashing．

3．When you press the【DESCEND】button or time runs out（game＇s playing time is adjustable），the gantry drives the motor to lower down the claw and attempts to catch object．
4．If＇Catch in air＇function is available，press【 DESCEND】 button before claw reaches in field，the claws will catch item in the air．
5．After the claw closes，the claw rises up until it touches the Stop－Up SW．Then the claw moves to exit area and opens．

## Game Rules

## DEMO

Play Demo music for 2 minutes every 3 minutes．

## Coin In

1．Coins per play：Controlled by DIP SW setting
2．If COIN pulse speed was lower than 10 milliseconds，the machine will not recognize the signal．
3．If coin pulse speed is over 200 milliseconds，the machine shows error code．

## Shaking Machine

1．When a tilt is installed in the machine，and players shake the machine，it says＂Don＇t Shake the Machine＂．
2．When the claw arms close and someone shakes the machine，the claw opens and moves back to the home position．

## DIP SW Setting

| 1. DIP SW1 |  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| When the DIP SW2 PIN \#6 is setup on "Play till you win", the claw strength voltage | VR1 Adj. of Power | ON |  |  |  |  |  |  |  |
|  | +48V | OFF |  |  |  |  |  |  |  |
| Position where claws open at the exit | Claws lower down then release object |  | ON |  |  |  |  |  |  |
|  | Claws release object at the top position |  | OFF |  |  |  |  |  |  |
| Coin $1 \&$ Coin 2 <br> Linked Together | Yes |  |  | ON |  |  |  |  |  |
|  | No |  |  | OFF |  |  |  |  |  |
| Adjustment of Credit Value | Inner Value |  |  |  | ON |  |  |  |  |
|  | DIP SW |  |  |  | OFF |  |  |  |  |
| Bonus Plays (see bonus table) (4 pulses $=\$ 1$ ) when Dip SW1-4 is off | YES |  |  |  |  | ON |  |  |  |
|  | NO |  |  |  |  | OFF |  |  |  |
| Claw moves to playfield when game begins | YES |  |  |  |  |  | ON |  |  |
|  | No |  |  |  |  |  | OFF |  |  |
| Reserved | FIXED |  |  |  |  |  |  | OFF |  |
| At the moment the program sends strong strength on the basis of the setup winning percentage, the system will keep sending strongest strength to the claw until a prize is caught. | On |  |  |  |  |  |  |  | ON |

## F 1 DISPLAY and Light Test

F 2 DIP SW Test
F 3 Demo Sound
F 4 Auto Demo
F 5 RESERVED
F 6 BACK TO DEFAULT
F 7 Length of String adjustment

## AUTO PERCENTAGING SETTING

SET Cost Of Play: (\$0.01~\$9.99)
Set Prize Value: (\$00.01~\$99.99)
Set Win Percentage (Range: 01~99 \%)
How to Setup:

1. Tilt (NC) +Button (NC) + Turn Power ON

Display shows "P5" for setup auto percentage function.
2. Tilt (NO) + Button (NO)

Display " 00 " in flashing:
Use Joystick and button to adjust
Function Code:
00 Exit
01 Cost Of Play
02 Prize Value
03 Win Percentages
04 This number shows how many plays needed before full strength of claw

| Er 10 | Prize Meter disconnected |  |  |
| Er 22 | Cabinet size check Error when power on |  | 1. Check if the stop-front $S W$ or stop-back $S W$ is out of work? <br> 2. Check if the air-plug of the gantry set connects well? <br> 3. Check the $\mathbf{J 4}$ Pin on the board connect well? <br> 4. PCB is fault |

## TROUBLE SHOOTING

| Items | Description | Check and Maintenance |
| :---: | :---: | :---: |
| $\begin{aligned} & \text { Coin } \\ & \text { In } \end{aligned}$ | No credit after coin in | 1. Check if the Coins vs. Plays is correct. <br> 2. If Coins vs. Plays can't be adjusted, it's possible main board problem. Please send the main board back for repair. |
|  | Coins/tokens cannot be inserted into coin slot | Comparative Coin Mech: <br> 1. Check the sample coin at the coin mech. <br> 2. Loose the coin mech sensitivity. <br> 3. Check if $\mathrm{DC12V}$ input to coin mech. <br> 4. Coin mech breakdown. <br> Multi-Coin Mech: <br> 1. Adjust the coin mech data based on manual. <br> 2. Check if DC 12 V input to coin mech. |
| Claw Power | Claw open after hitting upper-stop switch | VR2 is too low. Adjust VR2 higher according to objects dimension and weight. |
|  | Claw is close after power on | 1. Claw coil burned. <br> 2. Main board is out of service |
|  | Claw doesn't close | 1. Check if the CW at the fuse board burned? <br> 2. Check if the black wire at claw coil connects well. |
| Gantry | Don't return to its home position | 1. If power off and on again, the gantry still does not return to its home position, then check if stop-back SW (Gantry \& Assembly I No. 23) or stop-left SW (Gantry \& Assembly I No. 21) are in proper position. Also check if their connecting wires are properly connected. <br> 2. Check if the air-plug of the gantry set connects well? <br> 3. PCB is out of service. |
|  | Don't move either forward and/or backward by joystick operation | 1. Check if the forward/back motor fuse (FB) at the fuse board is burned? <br> 2. Check if $\mathbf{J 5}$ connecting pin of P.C.B. is properly connected. <br> 3. Check if stop-front SW (Gantry \& Assembly I No. 22) or back-stop SW (Gantry \& Assembly I No. 23) is in proper position. Also check if their connecting wires are properly connected. <br> 4. Check if Front/Back motor is out of function or if its wires are properly connected. Also check if its shaft pinion is properly positioned. <br> 5. Check if $\mathbf{J 9}$ connecting pin of P.C.B. is properly connected. <br> 6. Check if all connecting pins of gantry are properly connected to the machine. |

|  | Does not move to left <br> and／or right by <br> joystick operation | 1．Check if the left／right motor fuse（LR）at the fuse board is <br> burned？ |
| :--- | :--- | :--- |
|  | 2．Check if left and／or right SW is out of function or if their <br> wires are properly connected． <br> 3．Check if J5 connecting pin of P．C．B．is properly connected． <br> 4．Check if stop－left SW（Gantry \＆Assembly I No．21）is in <br> proper position． |  |
|  | 5．Check if Left／Right motor is out of function or if its wires are <br> properly connected．Also check if its shaft pinion is properly <br> positioned． |  |
|  | 6．Check if J9 connecting pin of P．C．B．is properly connected． <br> 7．Check if all connecting pins of gantry are properly <br> connected to the machine |  |

| Items | Description | Check and Maintenance |
| :---: | :---: | :---: |
| Claw Desce nding | Don＇t lower down by【Descend】 button operation，but only until time＇s up | 1．Check if【Descend】button is functioning properly． <br> 2．Check if connecting wires of 【Descend】 button are properly connected． <br> 3．Check if $\mathbf{J 5}$ connecting pin of P．C．B．is properly connected． |
|  | Don＇t lower down，but the Descend】button is in normal condition | 1．Check if Up／Down motor wires are properly connected． <br> 2．Check if Up／Down motor is out of function．Also check if its shaft pinion is in proper position． <br> 3．Check if J 9 connecting pin of P．C．B．is properly connected． <br> 4．Main board break down |
|  | Don＇t lower down or only down a bit and close up in the air then it returns to its home position | 1．Check if winding cord is stuck． <br> 2．Check if stop－down $S W$ is functioning properly |
|  | Don＇t fully lower down | 1．Check if winding cord is of proper length？ <br> 2．Check if winding cord is stuck． <br> 3．Check if stop－down $S W$ is functioning properly |
| Claw <br> Grab <br> bing | Don＇t open when reached to exit door after seizing | 1．Check if stop－back or stop－left $S W$ is out of function or if their wires are properly connected． <br> 2．Check if the gantry wire connecting to $\mathbf{J 9}$ connecting pin of P．C．B．is properly connected． |
|  | Don＇t rise up after seizing and is returned back to its home position | 1．Check if stop－up $S W$ is hit by something． <br> 2．Check if stop－up SW is in proper position and in normal function． <br> 3．Main board breaks down． |
|  | Don＇t close up and not be returned to its home position， either | 1．Check if the up／down motor are out of function or if their wires are properly connected． <br> 2．Check if stop－up $S W$ is functioning properly． <br> 3．Main board break down． |
